

AMENDMENTS TO THE SPECIFICATION:

Please amend the Summary of the Invention, beginning on page 3, line 4, of the specification to read as follows

Summary of the Invention

~~The present invention is directed to an absorbent article with a silhouette having a first portion, a second portion, wherein the second portion being in opposite relation to the first portion, and a first longitudinally extending edge and a second longitudinally extending edge being in opposed relationship between the first portion to the second portion; a layered portion including an absorbent core and a backsheet; at least one wing laterally extending from the first longitudinally extending edge or the second longitudinally extending edge; and means for removing the wing from the longitudinally extending edge.~~

~~The present invention is also directed to an absorbent article with a silhouette having a first portion having a maximum width, a second portion having a maximum width, wherein the second portion being in opposite relation to the first portion and the maximum width of the first portion is greater than the maximum width of the second portion, and a first longitudinally extending edge and a second longitudinally extending edge being in opposed relationship between the first portion to the second portion; a layered portion including an absorbent core and a backsheet; at least one wing laterally extending from the first longitudinally extending edge or the second longitudinally extending edge; and means for removing the wing from the longitudinally extending edge.~~

~~Alternatively, an attachment wing for securing an absorbent article to a garment with an upper surface including an absorbent article attachment for securing the attachment wing to the absorbent article and a lower surface comprising a garment attachment means securing the attachment wing to the garment.~~

~~Additionally, a kit is provided having an absorbent article and at least one attachment wing for securing the absorbent article to a garment.~~

The present invention relates to a kit for an absorbent article, the kit including:

A. a pantiliner having a silhouette including:

(a) a first end portion having a maximum width,

(b) a second end portion having a maximum width, the second end portion arranged in opposite relation to the first end portion and the

maximum width of the first end portion is greater than the maximum width of the second end portion, and

(c) a first longitudinally extending edge and a second longitudinally extending edge being in opposed relationship between the first end portion to the second end portion;

B. at least one attachment wing, the at least one attachment wing being structured and arranged to permit the selective attachment and detachment of the attachment wing to the pantiliner by a user.
